

Protein

Associated SBO term(s)

SBO:0000252 Polypeptide Chain

Recommended Glyph and Alternates

The protein glyph is a "pill" shape with a rectangular body and rounded ends, representing the compact space-filling mass of many proteins:

Prototypical Example

AraC protein

Notes

To avoid confusion with circles or ellipses, the "pill" shape SHOULD be significantly longer than it is tall, emphasizing its straight sides.
